CYBERBULLYING AMONG YOUTH: WHAT IS IT? HOW IS IT EXPERIENCED? WHAT DO WE DO ABOUT IT?

CANDICE BIERNESSER, PHD, LCSW
AGENDA

1. What is it?
   • Definition and prevalence

2. How is it experienced?
   • Mental health impacts
   • Experiences of middle school youth

3. What do we do about it?
   • Recommendations for parents, school personnel, and mental health clinicians
DEFINING CYBERBULLYING

Cyberbullying is defined as, “willful and repeated harm inflicted through the use of computers, cell phones and other electronic devices.”

– Cyberbullying Research Center

Criteria for bullying (Olweus, 1999):
(1) Deliberate intent to harm
(2) Imbalance of power
(3) Repeated over time

Unique elements of cyberbullying:
(1) 24/7 nature
(2) Different aspects of anonymity
(3) Potential for a broader audience

Suggested adaptation: Harm may be experienced in one incident or repeatedly over time across domains related to the most salient aspects of the physical self, including appearance, gender and race.
CYBERBULLYING CAN TAKE ON MANY FORMS

• Harassment
• Bias-based bullying based on race, color, religion, etc.
• Sexting
• Online spreading of misinformation
• Impersonation - posing as a victim through an online profile and sharing negative or inappropriate information
• Flaming - brief, heated online exchanges
• Exclusion from online groups or communities

CYBERBULLYING BY AGE AND SEX

• Age: Cyberbullying increases in prevalence after 5th grade, peaks in 8th grade, and remains a problem throughout high school, and college

• Sex: Lifetime victimization is more prevalent among girls (38.7% vs. 34.1% in boys) vs. lifetime perpetration is more prevalent among boys (16.1% vs. 13.4%)

Williams & Guerra, 2007
Hinduja & Patchin, 2019
CYBERBULLYING AMONG SGM YOUTH

• Sexual and gender minority (SGM) youth experience minority stressors (e.g., victimization, rejection, non-affirmation, and discrimination)

• SGM youth bullying experiences:
  • Gender policing
  • Deadnaming
  • Misgendering
  • Anti-SGM prejudice and discrimination

• SGM youth report cyberbullying at nearly 3 times the rate of non-SGM youth

Haas et al, 2011; Aboujaoude et al, 2015; Henderson et al, 2020
CYBERBULLYING AMONG YOUTH OF COLOR

• Online racial discrimination is common among youth of color.

• In a daily diary study, Black adolescents averaged over 5 racial discrimination experiences per day (English et al, 2020).

• More common than in offline settings

Tynes, 2015
CYBERBULLYING DURING THE COVID-19 PANDEMIC

• Babvey et al, 2020 - Identified increasing rates of abusive or hateful content and cyberbullying on Twitter, pointed to potential for children to be exposed to increasingly hostile content

• Shanahan et al, 2020 – found pre-COVID emotional distress was the strongest predictor of during-pandemic emotional distress followed by during-pandemic economic & psychosocial stressors, hopelessness, and pre-pandemic social stressors (e.g., bullying victimization & stressful life events)
Strongest associations with cyberbullying victimization include stress and suicidal ideation.

- Associated with internalizing symptoms of depression & anxiety and both suicidal ideation & behavior.

Strongest associations with cyberbullying perpetration include normative beliefs about aggression and moral disengagement.

- Associated with aggressive acts, substance use, delinquency, and suicidal behavior.
## Reviews of Social Media’s Influence on Youth Suicide Risk

SOCIAL ECOLOGICAL FACTORS OF BULLYING AND SUICIDAL RISK

School-level factors: school climate, policies, relationship with peers & teachers

Community-level factors: community supports, stigma associated with receiving care, access to safe spaces

Child-level factors: mental health status, isolation, availability of support, problem-solving skills

Family-level factors: positive relationship with parents, availability of parental support, family structure, access to firearms
HOW IS IT EXPERIENCED?

PERSPECTIVES FROM MIDDLE SCHOOL STUDENTS
FOCUS GROUP STUDY OF MIDDLE SCHOOL STUDENTS

• Conducted a qualitative focus group study of middle school students to inform a cyberbullying prevention intervention (2019-2020)
• Funded by AT&T and Pitt Cyber
• Investigative Team:
  • Rosta Farzan
  • Mary Ohmer
  • Lisa Nelson
  • Ana Radovic
  • Beth Schwanke
FOCUS GROUP STUDY OF MIDDLE SCHOOL STUDENTS

• Sample: 44 students
  • 70% female, 11–14-year-olds (average: 13), private & public schools

• Recorded, transcribed, & conducted content analysis

• Data collection focusing on:
  • Defining and contextualizing cyberbullying
  • Experiences with cyberbullying
  • Experiences with school-based prevention programming
  • Intervention needs
RESULTS: DEFINING AND CONTEXTUALIZING CYBERBULLYING

• Students defined cyberbullying as bullying in an online context, sometimes repeated in nature and occurring at different severity levels.

  “basically like when they’re bullying over the internet and not directly saying it to your face.”

• They felt bullying that occurred online offered a unique context.
  • Easier to be mean
  • Sometimes anonymous
  • No impact from facial cues/body language
  • Less oversight from parents and teachers

  “I think online it’s probably easier to get away with because your parents don’t see it then whereas if you do it in-person someone’s gonna say something.”
RESULTS: DEFINING AND CONTEXTUALIZING
CYBERBULLYING

• Participants reflected on the ways in which cyberbullying was particularly a problem for middle school students.

“I think back then [elementary school] it wasn’t really a problem because all our parents were like, because mine was like, ‘You don’t need a phone. You don’t need to go on all that stuff.’ But now it’s just to the point where you’re having bullying at school and it just extends to online, and it just gets worse and worse.”
RESULTS: EXPERIENCES WITH CYBERBULLYING

• Students acknowledged personal experiences with cyberbullying as a victim or perpetrator, as well as witnessing cyberbullying.
  • Victim: degrading physical appearance, diminishing reputation, rejection
  • Perpetrator (fewer reports): offensive jokes/misunderstanding
  • Witness: occurred more frequently

• Severe forms of cyberbullying:
  “Religions one’s that probably has the biggest impact.”
  “When they’re like racist, it’s probably the worst.”
  “Things like spying on people online, hacking into their information, stealing information…”
# RESULTS: REACHING OUT FOR HELP

RESULTS: EXPERIENCES WITH PREVENTION PROGRAMMING
RESULTS: INTERVENTION NEEDS
WHAT DO WE DO ABOUT IT?

RECOMMENDATIONS FOR PARENTS, SCHOOL PERSONNEL, AND MENTAL HEALTH PROFESSIONALS
• Build an awareness of social media trends and uses.
• Monitor access, use, and impacts of social media, particularly through open conversation.
• Consider the child’s developmental stage and mental health vulnerability.
• Mitigate exposure to potentially harmful content.
• Recognize both positive and negative aspects of social media.

https://cyberbullying.org/resources/parents
RECOMMENDATIONS FOR PARENTS

Prevention:

• Monitor through open conversations about experiences on social media.

Intervention:

• If one-time incident and/or minor in nature
  • suggest ignoring, deleting, or blocking the sender

• If repeated and/or severe in nature:
  • Listen supportively and calmly, show empathy, validate, relieve concerns toward consequences
  • Investigate what happened, documenting and saving correspondence
  • Consider contacting the content provider to report what happened
  • Communicate with the school if the incident involved another student
  • Involve law enforcement/seek legal advice when necessary

AAS RECOMMENDATIONS FOR PROFESSIONALS (2019)

• Ask youth about social media & how it impacts their daily life
• Include digital lives/social media use as a component of safety planning
• Recognize positive aspects of social media use that are important to adolescents, in addition to potential negative effects
• Recognize that some children are more vulnerable than others
• Mitigate exposure to harmful/hateful content

https://cyberbullying.org/resources/educators
https://cyberbullying.org/resources/health-care-providers
RECOMMENDATIONS SCHOOL PERSONNEL

• Thoroughly investigate all reports of cyberbullying
• Work with families of involved students
• Contact the website, game or app where the bullying occurred. Most platforms have procedures in place to deal with issues relating to cyberbullying.
• Involve school resource officer/law enforcement when necessary
• Provide support and resources to the targeted student and parents:
  • Reassure student that the bullying is not their fault
  • Make SAP/mental health referrals when needed

RECOMMENDATIONS FOR MENTAL HEALTH CLINICIANS: ASSESSMENT

• Add a measure of cyberbullying to your screening/assessment battery – only 11% of youth report cyberbullying to a trusted adult on their own

  • Review of cyberbullying measures:
    https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4703330/#lpo=34.3750

• Consider distressed emotional states that are common following cyberbullying:
  • Down mood
  • Fear
  • Worry
  • Loneliness
  • Hopelessness
  • Self-blame
  • Lack of belongingness
  • Feeling like a burden to others
RECOMMENDATIONS FOR MENTAL HEALTH CLINICIANS: INTERVENTION

• Intervene to reduce suicidal risk:
  • Support coping with cyberbullying with distress tolerance/emotion regulation techniques
  • Brief problem-solving skills could aid youth in responding to cyberbullying
  • Facilitate connections to trusted adults
  • Address barriers to motivation in help-seeking

• Recognize options for reporting of cyberbullying
  • PA Bullying Prevention Consultation Line: 1-866-716-0424
  • Additional resources: https://www.education.pa.gov/Schools/safeschools/bullying/Pages/default.aspx

• Liaison with schools & parents
RESOURCES/RECOMMENDATIONS FOR STUDENTS

• Prevention through curating a healthy and safe online environment
  • Cyberbullying Prevention Resources for Students

• Be an upstander
  • Emotionally support the person targeted by cyberbullying
  • Help them to seek help/support when needed

• If targeted by cyberbullying:
  • Take a pause. Consider how you’re feeling and how you want to respond.
  • Don’t retaliate.
  • Based on the severity and frequency of the bullying, consider ignoring it, seeking support, or reporting it.
    • Reporting resources: Report through social media, Pitt’s Anti-Harassment Policy
